

As seniors living in a state that already has some of the highest energy prices the recent electrical "delivery" rate increase is outrageous. If it is being caused by Eversource price gouging then PURA needs to roll back the increase to a reasonable level 5% or so not the 50% - 75% increases people have been experiencing. But if the increase is also being caused which I suspect it is by government mandates to use certain energy sources then those mandates must be eliminated to allow for livable electric rates in CT. We have enough factors driving retired people and may others out of CT. We need to start doing thins to keep people here and attract more.
