NA

**Testimony:**

My name is Jose Manuel Fuentes Pillich #369451

The first problem I wanna point out is the conditions of our water supply ..I've been in prison almost 17 years and the facility I'm currently in is one of the worst. The water here gave me a bad rash through out my body ..medical gives me cream but is not affective and I personally think its some type of fungus in the water. Also in my cell the water comes out foggy and does not taste good at all ..I show the correctional officer so he can allow me to get water from the slop sink and they denied me every time ..Also the living conditions are horrible at one big reason the quality of the air .. working in the factory is dust everywhere and while they doing construction on the windows and locking down the facility over the convinces of the construction is not right ..also there's no sign for asbestos warnings anywhere ..we should be informed of potential exposure ..even medical and dental here takes months to be seen ...I have pain in my gums my front teeth are separating and in so much pain I asked to been seen and its been a month still waiting ..also the food here is not portioned for grown men meaning we do not get enough protein or enough nutrients ..there only one outlet in the cells forcing us to use many extension cords which can cause a fire and there's no fire sprinklers in the cell also the size of the cell is not suitable for 2 grown men ..thank you for allowing me to release the my current frustration due to my current living conditions.
