

Dear Legislators,

UNTIL YOU CAN PROVE:

That every vaccine on the schedule was tested against a true, inert saline placebo

That every vaccine on the schedule has been tested in combination with one another for safety and efficacy

That every vaccine has been tested for human carcinogenic effects

That every vaccine has been tested for human fertility impairment

That every vaccine has been tested for mutagenicity

That there have been ongoing longitudinal studies for each vaccine, proving their safety and efficacy over time

That the federal compensation program for vaccine injury has paid out more than four billion of dollars in damages for vaccine injuries for no reason

That the Department of Health and Human Services has submitted the required reports every two years as per the National Childhood Vaccine Injury Act of 1986

That vaccine manufacturers can be held liable for damages

That no child will become disabled or die as the result of a vaccine injury

That autoimmune disorders are not caused by vaccine injury

That the rise in food allergies is not due to vaccine injury

That the rise in autism and other neurological disorders is not due to vaccine injury

That the rise in childhood cancers is not due to vaccine injury

That the vaccines are safer than the infections themselves

That the vaccines actually caused the decline in the infections and diseases that they are supposed to prevent

That more people have been injured by and/or died from these infections and diseases in recent history than the vaccines themselves

That there is not a biological reason why children have historically contracted these illnesses

That there are no positive health effects associated with naturally contracting these infections

That there are not aborted fetal cells in the vaccines

That there are not animal cell lines in the vaccines

That there are not heavy metals in the vaccines

That every parent receives true informed consent

That every doctor has been trained in how to recognize vaccine injury, how to report it, and how to help a child recover from it

That the HPV vaccine has prevented ONE case of cervical cancer

That Merck did not falsify data for the mumps portion of the MMR vaccine

That people have been dying as a result of these "measles outbreaks"

That it isn't a person's right to decide what medical interventions and pharmaceutical products they receive

That it isn't a person's right to decide to have a natural infection instead of a man made product

That it isn't a parent's right to make medical decisions for their children

That it does not violate our constitution to trample on our religious freedoms

That mandatory vaccination isn't a direct violation of the Nuremberg code

I DO NOT CONSENT.

"The greatest LIE ever told is that vaccines are safe and effective." Dr. Leonard Horowitz, MPH (Master of Public Health), DMD, MA, Harvard University graduate

Sincerely,

A Concerned Connecticut R.N.
