1	Definitions	2	Sufficient Participation in Care
3	Factors Impacting Engagement	4	Level of Care Examples
5	HEDIS IET	6	Questions/Discussion

Definitions

<u>Connection to Care</u> – is about the timeliness of beginning the next service or level of care.

<u>Engagement in Care</u> – is about participating in a sufficient amount of care to be likely to benefit.

Engagement in Care

- also conceptualized as the quality of participation in or investment in care.
- may be an important factor but measurement is more complicated

Sufficient Participation in Care

- Empirically (Prediction/ Regression) Evaluating the relationship between engagement and outcomes
- Empirically (Normatively) based on an outlier analysis approach
- Based on Program design/structure
- Arbitrarily pick a number out of the air or out of a hat

Factors Impacting Engagement

- Barriers to Access transportation, convenience, familiarity, hours, etc.
- Stigma
- Individual Factors severity of illness, supports, motivation
- Alignment with personal goals
- Program policies, procedures, or design
- Health literacy
- Experience of care
- Many others

Level of Care Considerations

- Defining engagement depends on the level of care/type of service
- Beacon has developed or considered engagement measures for the following levels of care
 - Any BH Service Use
 - Outpatient
 - Intensive Outpatient
 - IICAPS
 - Medication Assisted
 Treatment
 - Methadone
 - HEDIS Initiation and Engagement

6

Use of Any Behavioral Health Service by Gender (Duals Included)

- Females are the majority in adult membership in Medicaid at 56.3%
- There appears to be overall gender equity as the rate of BH use across genders is relatively equal

Use of Any Behavioral Health Service by Age (Duals Included)

- The largest age group for adult membership is 25-34
- The size of membership declines with age after 34

Connecticut BHP Seacon

BH Service Use by Age

- The 65+ year old age group has the highest percentage (42.4%) of individuals that have used at least one BH service
- Utilization appears to generally increase with age

8

 The absolute disparity between the youngest and oldest groups is 16.9 percentage points

Use of Any Behavioral Health Service by Race & Ethnicity (Duals Included)

BH Service Use by Race

- The "other" category has the lowest rate of any BH service use
- Unknown and Black populations have a use rate of any behavioral health service that is significantly lower than whites.

 Individuals that identify as Hispanic have a lower rate of any BH service use

Use of Any Behavioral Health Service by Geography (Duals Included)

- Middlesex has the highest rate of any BH service use at 42.80%
- Fairfield County has the lowest rate of any BH service use at 28.4%

Connecticut BHP Seacon

- The counties with the greatest % of the Medicaid population have the lowest percentage of BH service use
- This finding is believed to be due to race outweighing geography in the impact on any BH service use

Engagement in Outpatient – 2014 Clinical Study

- CHCS Study (Pires, 2013) found modal number of outpatient sessions is one and median across a 10 year period was 5
- Similar CT Data See Bar Chart to the right
- No health equity analysis was performed but use of measurement based care was promoted as a means of improving engagement.
 - Connecticut BHP Seacon

Engagement in Care - IOP

Measure Description: The percentage of treatment episodes where the member attends fewer than 9 treatment days – e.g. the lower limit of the "minimally adequate dose"

Rationale: Engagement in treatment for both children and youth has been identified as a critical factor in determining treatment outcome.

- 2015 IOP study: Adults and children that attended fewer than 9 treatment days per episode had poorer outcomes than those that received a minimally adequate dose
 - Adults Minimally Adequate Dose (9-16)

Connecticut BHP 🛛 🖉 beacon

Engagement in IOP Care: CY 2018 Statewide Rates

% of Episodes by Visits; All Adults

- Statewide in CY 2018:
 - Approximately 34% of members attended less than nine IOP sessions
 - 36% attended the minimally adequate # of sessions (9-16)
 - 30% attended more than 16 sessions
- There are differences in utilization based on whether the treatment focus was Mental Health or Substance Use

Connecticut BHP Sbeacon

Engagement in IOP Care: CY 2018 Statewide Rates

% of Episodes by Visits; Mental Health Focus

% of Episodes by Visits: Selected Provider vs Statewide

% of Episodes by Visits; Substance Use Focus

% of Episodes by Visits: Selected Provider vs Statewide

Engagement in Care – Intensive In-home Child and Adolescent Psychiatric Service (IICAPS)

- For IICAPS, engagement is defined by the service model parameters regarding expected duration of care and intensity of service based on number of billed ours per week per case.
- Some variation on these parameters is allowed based on case presentation so basic guidelines for caseloads rather than absolute cutoffs per case are provided
- For example, if greater than 15% of cases are below the 4-7 month optimal LOS, the program is deemed out of compliance for that measurement period.

Engagement in Care – Intensive In-home Child and Adolescent Psychiatric Service (IICAPS)

		DURATION			SERVICE INTENSITY				
Site Provider	N*	Average LOS (in months)	% Cases with LOS 0-4 Months	% Cases with LOS 4-7 Months	% Cases with LOS 7+ Months	Average Time Billed per Week per Case (in Hours)	% Cases with 0 – 4 Hours Billed per Week	% Cases with 4 – 6 Hours Billed per Week	% Cases with 6+ Hours Billed per Week
Boys and Girls Village	33	5.4	12.1%	87.9%	-	4.8	6.1%	90.9%	3.0%
Bridges	26	5.3	15.4%	80.8%	3.8%	5.4	19.2%	38.5%	42.3%
Catholic Charities	9	5.7	-	88.9%	11.1%	2.6	88.9%	11.1%	-
Child and Family Agency - New London	6	4.6	33.3%	66.7%	-	4.5	33.3%	66.7%	-
Community Child Guidance Clinic	12	5.0	25.0%	75.0%	-	3.6	75.0%	25.0%	-
NETWORK MEAN	483	5.4	12.2%	84.7%	3.1%	4.4	34.0%	60.2%	5.8%
NETWORK RANGE		4.2-6.4	0%-45.5%	45.5%-100%	0%-16.7%	2.6-5.4	0%-88.9%	11.1%-91.2%	0%-42.3%
BENCHMARKS			<15%	<u>≥</u> 70%	<15%		<20%	<u>≥</u> 70%	<10%

- This table is a sub-sample of providers selected to make the table more legible
- This data is regularly disseminated to IICAPS providers by agency and site
- IICAPS services manages the fidelity on these metrics as well as other indicators
- Certain exclusions apply to those included in the sample.

Engagement in Care – Medication Assisted Treatment (MAT)

- Medication Assisted Treatment (MAT) is an effective evidence based treatment for Substance Use Disorders (primarily for alcohol and opioid use disorders)
- MAT is intended as a relatively longer-term intervention particularly for opioids
- Graphic is for illustrative purposes still in development, caveats include N size, data quality, etc.
- Adherence Rate Based on Medication Possession Ratios from pharmacy and methadone claims

Engagement in Care – Medication Assisted Treatment (MAT)

 Content for the bars is as followsTop Line = Black, Second Line = Hispanic, Third Line = Unknown, Fourth Line = White

Adherence t	o MAT Medication				
Demographics Race/Ethnicity	Discharge Category Non Pilot Non Inducted	Select % Adherent 80%	First MAT Medication All		
Number of Non Pilot	Non Inducted at least 80% Adherent:	206			
Number of Non Pilot	Non Inducted Members:	1,349			
Percent of Non Pilot	Non Inducted at least 80% Adherent:	15.3%			

Engagement in Care – Methadone Clinic Treatment

- Approach is to evaluate the frequency distribution of Methadone Episodes by length of service and use cut-offs based on current norms
- Many methodological considerations
 - New episodes only
 - Exclude episodes <30 days
 - Etc.
- Chart to the right is illustrative only
 - Sample data to demonstrate approach
- Apply analysis by provider
- Use similar methodology to IICAPS
- Incorporate case-mix

Engagement in Care – HEDIS Initiation and Engagement (IET)

- Healthcare Effectiveness Data and Information Set
- Measure assesses the percentage of members that initiate and then engage in SUD care following an index diagnosis
- Initiation is a visit or admission within 14 days of the index
- Engagement is two or more visits or encounters within 34 days after initiation
- Dashboard can be filtered for AUD, OUD or any SUD

Initiation and Engagement in Alcohol and Drug Treatment (IET) Beacon-CT is not a certified HEDIS® vendor Diagnosis Group Select Year Select Demographic Diagnosis Group Image: Certified Address of Dependence (OAD) Image: Certified Address of Dependence (OAD)

Initiation and Engagement Rates: Opioid Abuse or Dependence (OAD) by Race/Ethnicity for 2017
