

HEDIS® Select Measure Review

Measurement Year 2021

- Lawrence Magras, MD, MBA
- SVP for Population Health and CMO
- April 12, 2023

HEDIS® is a registered trademark of the National Committee for Quality Assurance (NCQA).

Measures and Methodology:

- The following 15 HEDIS® measure slides display CT Medicaid's MY 2021 rates broken down by race and ethnicity and include a dotted reference line representing the CT statewide rate for each measure. The Race/Ethnicity and statewide rates for all 15 measures are calculated using an administrative methodology based on claims data and include members in the HUSKY A, B, C, and D programs.
- At the far right of each measure graph is a column representing the National Average percentage rate as well as the National Average Percentile. Measures that are marked "Hybrid measure" on the measure slide, use a hybrid rate when determining the National Average Percentiles. Hybrid rate calculations are based on a combination of claims data and chart review. The measures that are marked "Administrative measure" on the measure slide use the administrative rates (claims data only) when determining the National Average Percentiles.

Race/Ethnicity Sub-Categories:

- The rates are grouped into 7 Race/Ethnicity sub-categories. The members of Non-Hispanic origin are counted distinctly in either one of four race categories (Asian, Black/African American, Native American/Pacific Islander, and White/Caucasian), Unknown (member's race is not noted and is not of Hispanic origin), or Multiple Races (member is noted as being of multiple races but not of Hispanic origin). Members of Hispanic origin are counted in the Hispanic sub-category regardless of their race.

HEDIS® is a registered trademark of the National Committee for Quality Assurance (NCQA).

List of 15 HEDIS® Measures:

- HEDIS® MY 2021 Adults' Access to Preventive/Ambulatory Health Services (AAP)
- HEDIS® MY 2021 Asthma Medication Ratio (AMR)
- HEDIS® MY 2021 Breast Cancer Screening (BCS)
- HEDIS® MY 2021 Cervical Cancer Screening (CCS)
- HEDIS® MY 2021 Child and Adolescent Well-Care Visits 3-21 Years (WCV)
- HEDIS® MY 2021 Comprehensive Diabetes Care - Eye Exam (Retinal) Performed (CDC)
- HEDIS® MY 2021 Comprehensive Diabetes Care - HbA1c Testing (CDC)
- HEDIS® MY 2021 Immunizations for Adolescents – HPV (IMA)
- HEDIS® MY 2021 Kidney Health Evaluation for Patients With Diabetes (KED)
- HEDIS® MY 2021 Lead Screening in Children (LSC)
- HEDIS® MY 2021 Prenatal and Postpartum Care - Postpartum Care (PPC)
- HEDIS® MY 2021 Prenatal and Postpartum Care –Timeliness of Prenatal Care (PPC)
- HEDIS® MY 2021 Use of Imaging Studies for Low Back Pain (LBP)
- HEDIS® MY 2021 Well-Child Visits in the First 30 Months of Life – Ages 15 Months-30 Months (W30)
- HEDIS® MY 2021 Well-Child Visits in the First 30 Months of Life – Well-Child Visits in the First 15 Months (W30)

HEDIS® is a registered trademark of the National Committee for Quality Assurance (NCQA).

HEDIS® MY 2021 Adults' Access to Preventive/Ambulatory Health Services (AAP)

- The percentage of members ages 20 years and older who had an ambulatory or preventive care visit during the measurement year. This is an administrative measure. All rates are reported using the administrative methodology (claims only).
- Of the four Race/Non-Hispanic sub-categories, the Asian population had the highest rate (83.2%) and the Native American/Pacific Islander population had the lowest rate (79.0%).
- The average Non-Hispanic rate (80.6%) was 1.6 percentage points lower than the Hispanic rate (82.2%).
- The rates for the Asian Non-Hispanic, White/Caucasian Non-Hispanic, and Hispanic populations were higher than the Statewide rate (80.6%). The rates for the Native American/Pacific Islander and Black African/American Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (80.6%) was 4.8 percentage points higher than the National Medicaid Average (75.8%).

HEDIS® MY 2021 Asthma Medication Ratio (AMR)

- The percentage of members 5-64 years of age who were identified as having persistent asthma and had a ratio of controller medications to total medications of 0.50 or greater during the measurement year. This is an administrative measure. All rates are reported using the administrative methodology (claims only).
- Of the four Race/Non-Hispanic sub-categories, the Asian population had the highest rate (79.8%) and the Native American/Pacific Islander population had the lowest rate (61.5%).
- The average Non-Hispanic rate (66.4%) was 0.4.% higher than the Hispanic rate (66.0%).
- The rates for the Asian Non-Hispanic, and Hispanic populations were higher than the Statewide rate (65.2%). The rates for the Black African/American Non-Hispanic, Native American/Pacific Islander and White/Caucasian Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (65.2%) was 0.3 percentage points higher than the National Medicaid Average (64.9%).

HEDIS® MY 2021 Breast Cancer Screening (BCS)

- The percentage of women 50-74 years of age who had a mammogram to screen for breast cancer. This is an administrative measure. All rates are reported using the administrative methodology (claims only).
- Of the four Race/Non-Hispanic sub-categories, the Asian population had the highest rate (57.5%) and the Native American/Pacific Islander population had the lowest rate (45.0%).
- The average Non-Hispanic rate (53.5%) was 9.3 percentage points lower than the Hispanic rate (62.8%).
- The rates for the Asian Non-Hispanic, and Hispanic populations were higher than the Statewide rate (55.5%). The rates for the Black African/American Non-Hispanic, Native American/Pacific Islander Non-Hispanic and White/Caucasian Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (55.5%) was 4.5 percentage points higher than the National Medicaid Average (51.0%).

HEDIS® MY 2021 Cervical Cancer Screening (CCS)

- The percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria: 1) Women ages 21-64 who had cervical cytology performed within the last three years; 2) Women ages 30-64 who had cervical high-risk human papillomavirus (hrHPV) testing performed within the last 5 years; 3) Women ages 30-64 who had cervical cytology/high-risk papillomavirus (hrHPV) co-testing within the last 5 years. This is an administrative measure. All rates are reported using the administrative methodology (claims only).
- Of the four Race/Non-Hispanic sub-categories, the Black African/American population had the highest rate (57.5%) and the Native American/Pacific Islander population had the lowest rate (50.3%).
- The average Non-Hispanic rate (54.2%) was 5.6 percentage points lower than the Hispanic rate (59.8%).
- The rates for the Black African/American Non-Hispanic and Hispanic populations were higher than the Statewide rate (55.3%). The rates for the Asian Non-Hispanic, Native American/Pacific Islander Non-Hispanic and White/Caucasian Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (55.3%) was 1.0 percentage point lower than the National Medicaid Average (56.3%).

HEDIS® MY 2021 Child and Adolescent Well-Care Visits 3-21 Years (WCV)

- The percentage of members 3-21 years of age who had at least one comprehensive well-care visit with a PCP or an OB/GYN practitioner during the measurement year. This is an administrative measure. All rates are reported using the administrative methodology (claims only).
- Of the four Race/Non-Hispanic sub-categories, the Asian population had the highest rate (67.3%) and the Black African/American population had the lowest rate (63.3%).
- The average Non-Hispanic rate (66.4%) was 1.3 percentage points lower than the Hispanic rate (67.7%).
- The rates for the Asian Non-Hispanic, White/Caucasian Non-Hispanic and Hispanic populations were higher than the Statewide rate (66.6%). The rates for the Black African/American Non-Hispanic and Native American/Pacific Islander Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (66.6%) was 17.1 percentage points higher than the National Medicaid Average (49.5%).

HEDIS® MY 2021 Comprehensive Diabetes Care - Eye Exam (Retinal) Performed (CDC)

- The percentage of members 18-75 years of age with diabetes (type 1 and type 2) who had an eye exam (retinal) performed. This is a hybrid measure. The Race/Ethnicity, and Statewide rates are calculated using Administrative methodology. The National Medicaid Percentile is determined by using the hybrid rate and methodology (claims and chart review).
- Of the four Race/Non-Hispanic sub-categories, the Asian population had the highest rate (63.6%) and the White/Caucasian population had the lowest rate (51.6%).
- The average Non-Hispanic rate (54.9%) was 1.2 percentage points lower than the Hispanic rate (56.1%).
- The rates for the Asian Non-Hispanic and Hispanic populations were higher than the Statewide rate (53.7%). The rates for the Black African/American Non-Hispanic, Native American/Pacific Islander Non-Hispanic and White/Caucasian Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (53.7%) was 2.9 percentage points higher than the National Medicaid Average (50.8%).

HEDIS® MY 2021 Comprehensive Diabetes Care - HbA1c Testing (CDC)

- The percentage of members 18-75 years of age with diabetes (type 1 and type 2) who had a Hemoglobin A1c (HbA1c test) test during the measurement year. This is a hybrid measure. The Race/Ethnicity, and Statewide rates are calculated using Administrative methodology. The National Medicaid Percentile is determined by using the hybrid rate and methodology (claims and chart review).
- Of the four Race/Non-Hispanic sub-categories, the Asian population had the highest rate (90.7%) and the Black African/American population had the lowest rate (80.8%).
- The average Non-Hispanic rate (83.9%) was 0.4 percentage points higher than the Hispanic rate (83.5%).
- The rates for the Asian Non-Hispanic, Native American/Pacific Islander Non-Hispanic, and Hispanic populations were higher than the Statewide rate (82.6%). The rates for the Black African/American Non-Hispanic and White/Caucasian Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (82.6%) was 2.7 percentage points lower than the National Medicaid Average (85.3%).

HEDIS® MY 2021 Immunizations for Adolescents – HPV (IMA)

- The percentage of members 13 years of age who have completed the human papillomavirus (HPV) vaccine series by their 13th birthday. This is a hybrid measure. The Race/Ethnicity, and Statewide rates are calculated using Administrative methodology. The National Medicaid Percentile is determined by using the hybrid rate and methodology (claims and chart review).
- Of the four Race/Non-Hispanic sub-categories, the Asian population had the highest rate (35.5%) and the White/Caucasian population had the lowest rate (25.3%).
- The average Non-Hispanic rate (30.4%) was 10.0 percentage points lower than the Hispanic rate (40.4%).
- The rates for the Asian Non-Hispanic, Native American/Pacific Islander Non-Hispanic, and Hispanic populations were higher than the Statewide rate (32.3%). The rates for the Black African/American Non-Hispanic and White/Caucasian Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (32.3%) was 5.5 percentage points lower than the National Medicaid Average (37.8%).

HEDIS® MY 2021 Kidney Health Evaluation for Patients With Diabetes (KED)

- The percentage of members 18–85 years of age with diabetes (type 1 and type 2) who received a kidney health evaluation, defined by an estimated glomerular filtration rate (eGFR) and a urine albumin-creatinine ratio (uACR), during the measurement year. This is an administrative measure. All rates are reported using the administrative methodology (claims only).
- Of the four Race/Non-Hispanic sub-categories, the Asian population had the highest rate (48.0%) and the White/Caucasian population had the lowest rate (34.6%).
- The average Non-Hispanic rate (39.6%) was 1.2% lower than the Hispanic rate (40.7%).
- The rates for the Asian Non-Hispanic, Native American/Pacific Islander Non-Hispanic, and Hispanic populations were higher than the Statewide rate (37.9%). The rates for the Black African/American Non-Hispanic and White/Caucasian Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (37.9%) was 4.4 percentage points higher than the National Medicaid Average (33.5%).

HEDIS® MY 2021 Lead Screening in Children (LSC)

- The percentage of children 2 years of age who had one or more capillary or venous lead blood test for lead poisoning by their second birthday. This is a hybrid measure. The Race/Ethnicity, and Statewide rates are calculated using Administrative methodology. The National Medicaid Percentile is determined by using the hybrid rate and methodology (claims and chart review).
- Of the four Race/Non-Hispanic sub-categories, the White/Caucasian population had the highest rate (82.8%) and the Black African/American population had the lowest rate (76.2%).
- The average Non-Hispanic rate (79.6%) was 0.2 percentage points lower than the Hispanic rate (79.8%).
- The rates for the Asian Non-Hispanic, Native American/Pacific Islander Non-Hispanic, White/Caucasian Non-Hispanic, and Hispanic populations were higher than the Statewide rate (77.7%). The rate for the Black African/American Non-Hispanic population was lower than the Statewide rate.
- The CT Statewide rate (77.7%) was 15.4 percentage points higher than the National Medicaid Average (62.3%).

HEDIS® MY 2021 Prenatal and Postpartum Care - Postpartum Care (PPC)

- The percentage of deliveries of live births that had a postpartum visit on or between 7 and 84 days after delivery. This is a hybrid measure. The Race/Ethnicity, and Statewide rates are calculated using Administrative methodology. The National Medicaid Percentile is determined by using the hybrid rate and methodology (claims and chart review).
- Of the four Race/Non-Hispanic sub-categories, the Asian population had the highest rate (62.3%) and the Native American/Pacific Islander population had the lowest rate (43.5%).
- The average Non-Hispanic rate (53.7%) was 2.2 percentage points lower than the Hispanic rate (55.9%).
- The rates for the Asian Non-Hispanic, Black African/American Non-Hispanic, and Hispanic populations were higher than the Statewide rate (55.1%). The rates for the Native American/Pacific Islander Non-Hispanic and White/Caucasian Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (55.1%) was 21.1 percentage points lower than the National Medicaid Average (76.2%).

HEDIS® MY 2021 Prenatal and Postpartum Care – Timeliness of Prenatal Care (PPC)

- The percentage of deliveries of live births that received a prenatal care visit as a member of the organization in the first trimester, on the enrollment start date, or within 42 days of enrollment in the organization. This is a hybrid measure. The Race/Ethnicity, and Statewide rates are calculated using Administrative methodology. The National Medicaid Percentile is determined by using the hybrid rate and methodology (claims and chart review).
- Of the four Race/Non-Hispanic sub-categories, the Black African/American population had the highest rate (68.8%) and the White/Caucasian population had the lowest rate (58.8%).
- The average Non-Hispanic rate (64.3%) was 5.9 percentage points lower than the Hispanic rate (70.2%).
- The rates for the Black African/American Non-Hispanic and Hispanic populations were higher than the Statewide rate (65.8%). The rates for the Asian Non-Hispanic, Native American/Pacific Islander Non-Hispanic and White/Caucasian Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (65.8%) was 17.7 percentage points lower than the National Medicaid Average (83.5%).

HEDIS® MY 2021 Use of Imaging Studies for Low Back Pain (LBP)

- The percentage of member with a primary diagnosis of low back pain who did not have an imaging study (plain X-ray, MRI, CT scan) within 28 days of the diagnosis. The measure is reported as an inverted rate and is an Administrative measure. All rates are reported using the administrative methodology (claims only).
- Of the four Race/Non-Hispanic sub-categories, the Native American/Pacific Islander population had the highest rate (83.3%) and the White/Caucasian population had the lowest rate (73.9%).
- The average Non-Hispanic rate (77.5%) was 0.1 percentage point lower than the Hispanic rate (77.6%).
- The rates for the Asian Non-Hispanic, Black African/American Non-Hispanic, Native American/Pacific Islander Non-Hispanic, and Hispanic populations were higher than the Statewide rate (76.1%). The rate for the White/Caucasian Non-Hispanic population was lower than the Statewide rate.
- The CT Statewide rate (76.1%) was 1.6 percentage points higher than the National Medicaid Average (74.5%).

HEDIS® MY 2021 Well-Child Visits in the First 30 Months of Life – Ages 15 Months-30 Months (W30)

- The percentage of members who turned 30 months old during the measurement year and had two or more well-child visits. This is an administrative measure. All rates are reported using the administrative methodology (claims only).
- Of the four Race/Non-Hispanic sub-categories, the Asian population had the highest rate (89.2%) and the Native American/Pacific Islander population had the lowest rate (72.4%).
- The average Non-Hispanic rate (82.7%) was 2.8 percentage points lower than the Hispanic rate (85.5%).
- The rates for the Asian Non-Hispanic, White/Caucasian Non-Hispanic, and Hispanic populations were higher than the Statewide rate (82.2%). The rates for the Black African/American Non-Hispanic and Native American/Pacific Islander Non-Hispanic populations were lower than the Statewide rate.
- The CT Statewide rate (82.2%) was 16.3 percentage points higher than the National Medicaid Average (65.9%).

HEDIS® MY 2021 Well-Child Visits in the First 30 Months of Life – Well-Child Visits in the First 15 Months (W30)

- The percentage of members who turned 15 months old during the measurement year and who had six or more well-child visits with a PCP during their first 15 months of life. This is an administrative measure. All rates are reported using the administrative methodology (claims only).
- Of the four Race/Non-Hispanic sub-categories, the White/Caucasian population had the highest rate (79.5%) and the Native American/Pacific Islander population had the lowest rate (73.9%).
- The average Non-Hispanic rate (77.4%) was 2.5 percentage points lower than the Hispanic rate (79.9%).
- The rates for the Black African/American Non-Hispanic, White/Caucasian Non-Hispanic, and Hispanic populations were higher than the Statewide rate (77.4%). The rate for the Native American/Pacific Islander Non-Hispanic population was lower than the Statewide rate.
- The CT Statewide rate (77.4%) was 23.3 percentage points higher than the National Medicaid Average (54.1%).
