

STATE OF CONNECTICUT

DEPARTMENT OF SOCIAL SERVICES

Date: September 13, 2018
To: Internal and External Stakeholders
From: Roderick L. Bremby, Commissioner 
Subject: Enrollment counts January 2016 – August 2018

Dear Stakeholders,

We are pleased to announce the release of comprehensive monthly program enrollment data in a publicly-accessible, user-friendly format. We are publishing data spanning January 2016 to August 2018. We will continue to publish monthly updates, for example September 2018 enrollment data will be available in October 2018.

For the past two years, the Department has been gradually implementing a new eligibility system (ImpaCT), while simultaneously phasing out our primary legacy eligibility system (EMS) as well as a third minor system (ConneXion).¹ Additionally, the Department has worked closely with our partners at Access Health Connecticut to more seamlessly integrate eligibility determinations made in our shared Health Insurance Exchange (HIX) rules engine with the new ImpaCT system. Over this period of time, eligibility determinations have been made in all of these systems, creating a significant data management challenge. We have worked diligently to reconcile and aggregate enrollment data sourced from these four systems to provide the reporting functionality that we introduce today.

Methodology

To calculate the monthly enrollment counts for active recipients that receive any type of DSS assistance, an aggregated database was constructed by combining enrollment data from the four systems, namely, EMS, ImpaCT, HIX and ConneXion. The Department combines a monthly extract of the system database from EMS and ImpaCT with a monthly file from HIX that contains active recipient activity. The Department uses archival data from ConneXion to provide historical enrollment counts for CHIP (this data is currently derived from the HIX file). The data from the four systems is aggregated through a batch process to produce an integrated database of records that conceptually look like this:

Year | month | client ID | type of assistance code | demographics (race, ethnicity, township, age)

Some translation occurs when the data is put into the merged database from each of the feeder systems. For example, EMS coverage groups are mapped to a common set of coverage group codes in the ImpaCT system, known as “types of assistance” or TOAs. This mapping is codified in

¹ ConneXion was used to determine eligibility for the Children’s Health Insurance Program, or CHIP.

a TOA mapping document (Appendix A) that may be helpful in understanding the relationship between common program names and how these data are displayed in the reports.²

Similarly, HIX TOA codes are mapped to the common set of TOA codes used by the merged database. EMS and ImpaCT client IDs are shared across the two systems, but HIX person IDs must be mapped during the merge to the corresponding EMS/ImpaCT client IDs. This is done by using the mapping tables from the Enterprise Master Person Index (EMPI) system. The end result of this translation is a merged database that is simple to use but accurately reflects the data in the merged database using a system-independent set of values.

General Notes. The following notes, read in conjunction with the guides in Appendix A and B, may help the user in understanding how the underlying data was compiled. For additional detail on how the Department conducts health care enrollment reporting, please review our Reporting Guide to Healthcare Enrollment (Appendix C).

1. Prior to 10/1/16 EMS is the system of record for all Types of Assistance (TOAs) except CHIP (B1 and B2) for which ConneXion is the system of record.
2. Starting 10/1/2016 ImpaCT and EMS are the systems of record for all except 9 TOAs (CHIP B1, CHIP B2, M09, X01, X02, X03, X04, X07, X25).
3. Starting 10/1/16 HIX is the system of record for 9 TOAs (CHIP B1, CHIP B2, M09, X01, X02, X03, X04, X07, X25).
4. Prior to 5/1/17 EMS and ImpaCT are the systems of record for the F10/X10 TOA. Starting 5/1/17 EMS, ImpaCT and HIX are the systems of record for the F10/X10 TOA.
5. The ES1 TOA includes Social Work Services benefits and other services such as Summer EBT program.
6. Town is associated to the beneficiary using the residential address for each month for a TOA.
 - For annual counts, if a person moved and therefore lived in two towns then they are attributed to both towns.
 - For month counts, if a person moved then they are counted in the town that they were residing in at the end of the month.
7. In order to comply with data privacy requirements, enrollment numbers are suppressed if a count has less than 5 individuals.
8. Due to the need to aggregate data from four systems (EMS, ImpaCT, HIX, ConneXion), there may be some duplicates and therefore slight over-counts in any given TOA. The Department continues to check for duplicates using our Enterprise Master Person Index that is used to manage identity of beneficiaries.
9. If enrollment counts change, new reports will be published with the updated counts as data is synchronized between the systems.
10. Enrollment is usually, but not always, equivalent to eligibility. In the healthcare context, enrollment counts are counts of individuals who applied for health coverage and were determined eligible for Medicaid or CHIP and decided to proceed with enrolling.

² Appendix B is a medical coverage group overview that may be helpful in understanding the basic elements of eligibility for various medical coverage types as well as their corresponding system codes.

Noteworthy, CHIP Band 2 (B2) also requires a premium to be received before coverage begins, thereby going from “eligible” to “enrolled” once the payment is received. Current B2 counts are at the eligibility level.

Data Limitations. Given the complexity of merging and aggregating data across systems, despite our efforts to reconcile the data it is possible that the data will be updated over time. While we strive to provide stable data, if we discover issues in our data or methodology, we will update these data and notify users of any data refinements. As we complete the transition from four systems of record to two systems of record (ImpaCT and HIX) and continue our work on validating and synchronizing these data between systems, we anticipate that these datasets will stabilize overtime.

Our team at DSS will continue to review and analyze the data to ensure the accuracy and reliability of these numbers. If you have questions about coverage groups or eligibility, please reach out to either Peter Hadler at peter.hadler@ct.gov or Kristin Dowty Kristin.dowty@ct.gov. If you have technical questions when accessing reports, please reach out to Minakshi Tikoo at Minakshi.tikoo@ct.gov.

Appendix A: The following table should be used to review and understand the data being release today and to understand how the counts are aggregated:

Appendix C

Reporting Health Care Enrollment

Guidance for the consistent reporting of health care enrollment

Version 1.5

Document Controls

Purpose

Provide a single source of guidance for how to report on DSS health care enrollment numbers.

Individual reports should follow these guidelines, Reports should cross-reference the coverage group list in this document and avoid creating their own lists, e.g., if reporting the MAGI group, reference the list in this document rather than developing a new list for the report.

Out of Scope

The document is limited to enrollment reporting and does not include activity reporting such as monthly applications, renewals, determinations and denials.

The approach to activity reporting (for the CMS Performance Indicators for example) should be complementary, but there are additional considerations and nuances.

Target Audience

Those involved in the design and development of medical enrollment type reports.

It is assumed that there is a general understanding of the HUSKY programs and terminology such as MEC and LTSS.

Glossary of Acronyms

- ABD - Aged Blind & Disabled
- ASO - Administrative Service Organization
- CARTS - CHIP Annual Report Template System
- CHIP - Children's Health Insurance Program
- CMS - Centers for Medicare and Medicaid Services
- DCF - Department of Children & Families
- HIX - Health Insurance Exchange
- FPL - Federal Poverty Level
- LTSS - Long Term Services & Support
- MAGI - Modified Adjusted Gross Income
- MAPOC - Medical Assistance Program Oversight Council
- MEC - Minimal Essential Coverage
- MMIS - Medicaid Management Information System
- MSP - Medicare Savings Plan
- OPM - Office of Policy & Management
- PE - Presumptive Eligibility
- SEDS - Statistical Enrollment Data System
- SOP - Standard of Promptness

Background

Historical Background

Prior to October 2013 the Department had a single Medicaid eligibility system (EMS) and a single Children's Health Insurance Program (CHIP) eligibility system (ConneXion). Although these systems were legacy systems, they were stable and there was a clear separation of programs. These two separate systems allowed for simplified eligibility and enrollment reporting. However, as legacy systems there were other types of reporting limitations, e.g., reporting tools were limited and some data elements, such as the application channel, were not captured.

In October 2013, Connecticut implemented its state-based Health Insurance Exchange which included a shared integrated eligibility and enrollment system commonly referred to as HIX. By Q3 of 2015 this system was responsible for approximately 88% of the Medicaid eligibility determinations and 100% of the CHIP eligibility determinations. During the 2014 and 2015 transition period, medical eligibility determinations were spread between the three systems and individuals; new applications were processed directly in the HIX and (legacy) enrolled individuals were transitioned into the HIX month by month at the time of their renewal. However, since HIX eligibility determination results were manually entered and "warehoused" in the legacy systems (as a pass-through mechanism to the MMIS), the State could continue to use the legacy EMS and ConneXion systems for centralized enrollment reporting.

During the 2014, 2015 and 2016 period, the reporting challenges included:

1. A transitioning client-base and the risk of duplicative counting across systems.
2. An expanding HIX system where new coverages were being added, e.g., newborns, post-partum, TMA and EMA. As programs were added, clients in the same coverage group in the legacy system could have been determined by either the HIX or EMS.
3. A manual data entry process to enter the HIX results into the legacy systems (not real-time transfer).
4. A HIX built quickly to meet ACA deadlines and with technology stabilization issues that allowed for duplicate enrollment records of the same person and other assorted reporting challenges.
5. The impossibility of reporting multi-year historical look-backs (e.g., for SEDS) because the data was in transition between determination methodologies and systems.
6. Only enrollment data could be taken from the legacy system (understanding the caveats above), while other types of related data (applications, enrollment rates by FPLs, etc.) had to be taken from the HIX as it had the processing details that the legacy systems no longer had. Reporting from different systems for the same client base is less than ideal.

In October 2016, the Department started the implementation of its new eligibility and enrollment system, called ImpaCT, for the remaining non-HIX medical coverage groups as well as nutritional and economic assistance programs. The system was rolled out gradually across the state and approximately 90% of the recipient population was converted into ImpaCT by August of 2017. As the new system was rolled out, more and more of the eligibility determinations were subsumed into the new system. However, legacy system conversion had a "long tail" and the last of the active enrollments were not completed until August 2018.

Whereas the medical reporting challenges for 2014 through 2016 were HIX related, the reporting challenges for 2017 and 2018 were ImpaCT-conversion related, i.e., while we could once use the legacy systems for enrollment reporting (with some known limitations), we now had an additional system in the mix that was subsuming enrollments from the legacy systems on a day-by-day basis, i.e., we could no longer use just the legacy systems.

Additional challenges during this rollout and conversion period included:

1. ImpaCT and the real-time automated transfer of enrollment data between the HIX and ImpaCT systems was stabilizing.
2. The extended conversion meant that more of the automated transfer messages could not be ingested by ImpaCT due to partially-converted (“spider-web”) families, i.e., require manual intervention and data entry. The more manual data entry, then naturally the longer the time lag for data entry and increased possibility of human data-entry errors.
3. During this rollout period scripted database fixes were sometimes used to ensure that clients were promptly covered; while advantageous for ensuring proper coverage this sometimes bypassed key data aggregation fields in the ImpaCT database. The scripted fixes were sometimes required by interim business processes needed to resolve a transitional ImpaCT issue.
4. A premium processing system was rolled out at the end of 2017 to support MED-Connect and CHIP Income Band 2; this functionality replaced a third-party contractor system. This system determines when a Band 2 client has made their first premium payment and is considered fully enrolled.

Current Situation

During the period January 2014 through August 2018 over 2.250 million PDFs were generated by the HIX and manually entered into the legacy systems of EMS (Medicaid) and ConneXion (CHIP). The manual data entry of HIX-generated PDFs into the legacy systems has now ended.

To convert HIX data into the ImpaCT system involved a large-scale manual data entry effort to align coverages between the HIX and the legacy systems and to correct data issues related to the master person index.

The system of record for reporting HIX enrollment data was originally the legacy systems (as discussed above). Once ImpaCT began to be implemented in October 2016, it became preferable to use the HIX as the direct source of HIX enrollment numbers. This allows enrollment reporting and activity reporting (applications, renewals, determinations, and denials) to be pulled from the same system.

Additionally, historical medical reporting that involves the transitional year of 2017 is challenging if it involves combining data held in EMS and ImpaCT as well as HIX. Data reporting is simplified by using HIX as the system of record for reporting on HIX-based medical coverage groups (including CHIP) from October 2016 onwards.

Enrollment Reporting Requirements and Considerations

Overview

As of August 2018, the technical challenges of ongoing reporting have greatly simplified (historical lookbacks and trends are still challenging). There are now just two systems from which to derive

eligibility and enrollment data: HIX is the system of record for HIX-based coverage groups and ImpaCT is the system of record for all other medical coverage groups.

The reporting complexity that remains is concerned with understanding, articulating and consistently implementing some of the business nuances concerned with enrollment reporting. Whereas, the broad requirements of a report may be understood, business considerations include:

1. Which coverage groups should be included based on the purpose and target audience of a report, e.g., medical funding considerations (title XIX, title XXI, State, ACF/ORR or other), determination methodology (e.g., MAGI), determination source (e.g., HIX), and limited or full benefits.
2. How to handle the subtleties of emergency medical, historical coverage (late processing, retroactive coverage and reconsideration), unpaid initial premiums, etc.

This document provides guidelines to address these business complexities.

Report Target Audiences

Broadly speaking, there are three types of audiences:

1. Federal partners, in particular CMS – there are a variety of reports that measure eligibility and enrollment, continuity of coverage, and operational activities (e.g., applications and renewals). These include CMS CARTS, CMS SEDS and CMS Performance Indicators.

Federal reports are aligned around funding streams and federal regulations and therefore can distinguish between coverage types, i.e., Title XIX or Title XXI, and MAGI or non-MAGI.

Federal reporting requirements are defined at a very detailed level and there is little flexibility on what to include or exclude. These reports will not roll-up neatly to state-branded HUSKY groups.

2. Connecticut (External) Stakeholders – this includes organizations such as the legislature, MAPOC and advocacy groups. Reporting around funding streams is less important, and there is more of a focus on grouping by coverage types (e.g., HUSKY A, B, C, and D) and channels.
3. State Organizations – these include OPM and DSS and they have similar requirements to the external stakeholder view, although often with data requirements that expand beyond enrollment data and overlap into operational performance.

High-Level Approach

To create an enrollment report:

1. Try to use an existing report for your purposes especially if that report is to be shared externally. This reduces the chances of errors or inconsistencies creeping into the reporting numbers.
2. Follow the Detailed Guidance instructions in defining the report.
3. Use the Detailed Classification list as a way of specifying what should or should not be included in the report. Do not repeat a classification list (e.g., the list of MECs) within the report specification; include it by reference to this document.

- a. If the classification is not already included, the Department can expand the table to include it in this document.

Detailed Guidance

CMS Federal Reporting

CMS federal reports are limited to Medicaid (Title XIX) and/or CHIP (XIX) and these funding streams are specified in the Detailed Classification section. Within this classification, CMS may ask for additional breakdowns, e.g., Adults and Children, MAGI and non-MAGI, HIX and Direct.

When reporting enrollment numbers to CMS, unless it states otherwise, exclude the limited benefits coverage types even if they are CMS funded, e.g., family planning and emergency medical.

This is consistent with the directives for the CMS Performance Indicators.

State and Connecticut Stakeholder Reporting

When reporting enrollment numbers within the State we are typically reporting HUSKY coverage counts. Therefore, we typically include limited benefits coverage types and report across funding sources.

An exception to this approach is emergency medical, which should be excluded unless explicitly requested (see Emergency Medical).

HUSKY A, B, C and D

As previously stated, reporting using this organization of medical coverage is important for DSS and other Connecticut-based stakeholders.

Connecticut introduced the HUSKY branding in 1998 to describe the Children's Health Insurance Program (CHIP). HUSKY was an acronym for Health Care for Uninsured Kids and Youth. Many states similarly adopted branding to differentiate their CHIP coverage from Medicaid.

Over time the HUSKY branding has been extended and now applies to Connecticut Medicaid coverage (CHIP became HUSKY B). Since HUSKY is a branding, there is some flexibility on what it could include. Consequently, the HUSKY program is considered to include all those programs that are managed by the Administrative Services Organizations (ASOs) and receive a HUSKY Medical Card and those that have a natural affinity with other coverage options, e.g., various State programs.

To report on HUSKY, use the classification of data in the Detailed Classification section.

Note that:

- To get total counts, it is necessary to pull data from both the HIX and ImpaCT.
- Whereas most of HUSKY A is determined within the HIX, there is a small volume determined within ImpaCT
- The data includes federally and state funded coverage types.
- The data includes MEC and non-MEC coverage types.
- The data includes limited and full-benefit coverage types.

- The data includes contingent enrollments (see Presumptive Eligibility and Premiums)
- The data excludes the MSP (“Q track”) coverage types.

The reports should typically be written to exclude emergency medical coverage (see Emergency Coverage)

MAGI and non-MAGI

As previously stated, reporting using this organization of medical coverage is most often used in federal reports.

The reporting distinction of HIX vs direct Medicaid Agency enrollments is of interest to DSS. This almost aligns to MAGI vs. non-MAGI, but not quite. Whereas most MAGI determinations occur within the HIX, ImpaCT determines a small subset of coverage types, e.g., institutionalized non-disabled, presumptive eligibility and (MAGI) emergency medical coverage.

Report developers should use the classification of data from the Detailed Classification section.

System of Record

Every medical coverage group is now cleanly assigned to one given system-of-record (emergency medical is an exception).

Only report enrollment numbers out of the system of record. Specifically, do not report HIX enrollments out of the ImpaCT system even though HIX enrollments are also warehoused in ImpaCT after the eligibility determination is made within HIX.

Report Run Dates and As-Of Dates

“As-of dating” is the term used to describe a date versioning axis that is orthogonal to the effective date timeline, e.g., data effective January looks one way in January, but could be modified multiple times such that January looks different as of February, as of March and so on.

Data changes historically in Medicaid because of the elapsed time in processing paper documents, clients reporting data after the event, retroactive coverage requirements, and MAGI reconsideration periods.

Since the HIX and ImpaCT systems, for the most part, do not include the ability to easily run “as-of date” reports, the data in a report is sensitive to when a report is run. It is therefore important to run reports at a consistent point each month.

Enrollment counts should be taken as of the last day of the calendar month. The reports should be run as close to the start of the first day of the following month, i.e., before historically applied changes can occur.

Monthly enrollment reports that are not run before the start of business hours on the first of the following month, should clearly state the as-of date in the report, e.g., “January 2019 Enrollment - as-of March 15th 2019”. The stating of an as-of date is good practice even when a report is run timely.

Calendar Periods

Enrollment type reports can be requested for various calendars and scenarios:

- Federal reports are typically based on the federal fiscal years (October 1 through September 31). Using this federal fiscal calendar, there are a variety of federally required reports, e.g., a fiscal quarter, a fiscal year, and two federal fiscal years (e.g., CARTS Table 3.a and 3.b).
- Connecticut has a fiscal year that is different to the federal fiscal year. Reporting enrollments for this State-based period can be of interest to some groups within the State.
- Operationally the State more naturally looks at year-over-year comparisons and trends using traditional calendar years.

There are two types of calendar period type reports:

- **Point-in-Time Lookback** – these types of reports are run at a single point in time at the end of the calendar period in question, and provide information for the whole of that calendar period. One example is a federally required report that is interested in the total number of children that were ever enrolled at any point during the quarter. There are other federal reporting examples that look at measures of continuous coverage over a quarter, year and ultimately a two year period.
- **Timeline Trends** – these type of reports show the enrollment (or a targeted enrollment subgroup) trended over time, e.g., the enrollment counts month-by-month over a year. Current medical operational planning reports, for example, capture monthly data and show it graphically trending over a year and also provide graphical year-over-year comparisons. The data captured monthly in the CMS Performance Indicator reports are also a source for showing timeline trends.

The guidance is as follows:

- **Point-in-Time Lookback** – the guidance is to follow as much as possible the standard enrollment counting guidance described throughout this document for the selection of the reporting group, (e.g., children or MAGI) and then follow the individual reporting instructions.
- **Timeline Trends** – to create these graphical reports it can be as simple as adding the monthly data reports to a rolling Microsoft Excel worksheet. To create them programmatically requires the monthly data to be stored in a database table when the enrollment report is first run, i.e., since the systems do not readily support as-of dating it is difficult to recreate report data and therefore each month should be captured when it is first run, either in a database table or manually in Excel.

Medicare Savings Plan (MSP)

MSP (“Q track”) coverage is Medicaid uses funding, but does not provide coverage itself. MSP enrollment pays for Medicare premiums and cost sharing.

MSP is typically excluded from the definition of HUSKY (State reporting) because MSP provides no health benefits itself and because someone could be receiving HUSKY coverage and be enrolled in MSP, i.e., dual eligible. If HUSKY and MSP enrollment are reported together it is necessary to address clearly the issue of dual enrollment and de-duplicate the counts. Typically, it is better to isolate the MSP numbers clearly from the HUSKY numbers.

MSP is typically excluded from federal enrollment reports for similar reasons and because it is considered “limited benefits”, i.e., only include MSP if it is explicitly requested.

Although MSP counts are best reported separately from other Medicaid health coverage, it is possible that MSP recipients will be included in activity reports, e.g., in applying for MSP someone may have a Medicaid determination and so they will appear in application and eligibility determination counts

whether they are denied, (also) determined eligible for another type of Medicaid, or determined eligible for MSP.

Long Term Support Services (LTSS)

Use the classification of data from the Detailed Classification section when reporting just these numbers.

Note that LTSS is primarily a subset of HUSKY C, but there is an LTSS type HUSKY A group and since 2014 there has been an LTSS coverage group within HUSKY D. Until ImpaCT the HUSKY D institutionalized adult group was not clearly identified.

Department of Children & Families (DCF)

Use the classification of data from the Detailed Classification section.

Note that for DCF type coverage includes:

- Both State and CMS funded programs.
- Full and limited benefit coverage types.
- Explicit dedicated coverage groups (“D track”) as well as children enrolled in the X25 Children’s group (this group will eventually be added as a distinct D track group). Until a distinct D track group is added, these children are difficult (but not impossible) to identify within the X25 group.

Pending

We do not include pending coverage (neither pending verifications nor pending a spend-down threshold being met) within the enrollment counts, although they could be included within determination type numbers.

Presumptive Eligibility

Unless otherwise directed, include presumptive eligibility coverage within the enrollment counts.

Premiums

Unless otherwise directed, include CHIP Band 2 children in the enrollment counts even if their enrollment was conditional on receipt of the initial premium payment.

This approach simplifies reporting and aligns with the CMS Performance Indicator directives to include CHIP children in a premium grace period as well as conditional eligibility.

Specialized State reports can be created to report on premium payments and enrollments. In addition, footnoted counts can be added to State enrollment reports to indicate the number of premium-conditional enrollments.

CHIP Waiting Periods and Lock-Outs

The CHIP program in Connecticut no longer operates a waiting period or lock-out.

Should these business processes be reinstated, then CHIP children subject to a waiting period or premium lock-out period should be considered eligible but not enrolled and should be excluded from enrollment counts. This is consistent with CMS Performance Indicator directives.

Emergency Medical

Emergency medical is difficult to isolate, is limited to a single medical issue (i.e., not an ongoing coverage period and with limited benefits) and in Connecticut it is typically applied to a medical event that happened historically. For these reasons, we will deliberately exclude this coverage from the enrollment numbers (mostly a coverage event excludes itself as it is recognized after the enrollment reports are run).

Historical Processing (Late, Retroactive and Reconsideration)

As discussed previously, the enrollment counts for a given calendar month will generally increase if the same enrollment report for that month was run again on a future date.

Paper processing maintains the application date as the receipt date of the forms, even if the eligibility and enrollment were not processed until a later month. Both retroactive coverage and MAGI renewal reconsideration logic could increase enrollment counts for up to 90 days after the end of a target calendar month. The combination of a 90-day standard of promptness (SOP) for LTSS application processing and up to 3-months of retroactive coverage, create a window of 6-months for enrollment counts to reasonably change.

Although it would be accurate to repeatedly update a given month, it is confusing and unhelpful for most users of the enrollment reports and those interested in enrollment trends.

Definition of the Age of a Child

The primary child coverage groups (HUSKY A X25 and HUSKY B) use 18 as a maximum age, i.e., age-out on turning 19 in the enrollment month. Some groups, such as the DCF track, also include young adults up to the age of 21. For reporting purposes, typically use 19 and older as the standard definition of an adult.

Children in Adult Programs

Under certain circumstances, the systems can add a new child enrollee into the adult coverage group one month early. This is generally beneficial for the new client as there is less (confusing) correspondence from the system.

For those enrollment reports that are counting the number of children or adults in a group, we should not count any children who are in an adult-only group or an adult in a child-only group (delayed disenrollment), e.g., when adding up children, only include those coverage types that could reasonably have children within them (not the dedicated adult groups).

Detailed Classification

Obsolete coverage groups have been removed.

If a report requires historical enrollment reporting then it may be necessary to consider obsolete codes that are not shown here.
