Potential Department of Transportation Savings Report (2019)

The State of Connecticut Department of Transportation would have saved \$324,691,150 in Fiscal Years 2016, 2017, and 2018 had it performed Construction Inspection and Engineering Services with State Employees in lieu of Outside Consultants.

In October, 2014 a new statute went into effect that requires the State to perform Costs Effectiveness Evaluations for work that is continually contracted out. Through a Freedom of Information Request to the Department of Transportation, cost evaluations in the areas of Construction Inspection and Engineering Services were obtained for 2019.

Cost-effectiveness evaluations reports for the construction engineering and inspection and the engineering consultant design were performed by the Connecticut Department of Transportation in accordance with methodology developed by the Connecticut Office of Policy and Management and Connecticut General Statutes 4e-16. The reports detail how much was spent on individual contracted out projects and what the cost would have been if a state employee were substituted for each consultant employee.

The data from the cost evaluations indicate savings of 61.61% for Construction Inspection work had in-house personnel performed the work (without indirect costs). Cost evaluations indicate savings of 58.46% had in-house personnel performed Engineering Services (without indirect costs).

The Freedom of Information Request that was submitted to the Department of Transportation also requested amounts spent by the Department for contracting out these services for Fiscal Years 2016, 2017, and 2018. The amount spent by the Department of Transportation for Construction Inspection was \$58,478,564.80 for fiscal year 2016, \$45,647,629.89 for fiscal year 2017, and was \$37,302,592.12 for fiscal year 2018. The amount spent by the Department of Transportation for Engineering Services was \$134,663,667.91 for fiscal year 2016, \$147,312,937.83 for fiscal year 2017, and was \$124,390,845.55 for fiscal year 2018.

From the data obtained, potential savings was calculated by multiplying the total amount spent in each section by the calculated savings rates. The data indicates that for Construction Inspection work, the Department would have realized savings of \$36,027,308 in fiscal year 2016, \$28,122,462 in fiscal year 2017, and \$22,981,275 in fiscal year 2018 had the work been performed in-house. The data also indicates that for Engineering Services work, the Department would have realized savings of \$78,723,616 in fiscal year 2016, \$86,118,307 in fiscal year 2017, and \$72,718,182 in fiscal year 2018 had the work been performed in-house.

The data from the attached report indicates the Department of Transportation would have realized total savings of \$144,750,924 in fiscal year 2016, \$114,240,769 in fiscal year 2017, and \$95,699,457 in fiscal year 2018 had these three key state services been performed inhouse instead of contracted out. An investment in the state workforce now would allow for more work to be performed in-house and the Department of Transportation to realize future savings.

Potential Savings if State Employees performed Inspection and Engineering work Instead of Contracting Out for Fiscal Years 2016, 2017 and 2018. Information was received via a Freedom of Information request to the Department of Transportation

# **Cost-Effectiveness Evaluation or New or Renewal Privatization Contracts**

# State Contracting Agency: Dept. of Transportation

# **Contract Title/Description:** 7 Construction Engineering and Inspection Renewal 2019

**Need for New Contract/Renewal:** The Department is continuing the practice of hiring outside Consultants to provide Construction Engineering and Inspection Services to augment state forces where the Department does not have available staff to perform the work, or where the skills required to perform the work are not present within the Department.

**New Contract and Historical Contracts Information:** The Department is in the process of contracting with a number of firms for Construction Engineering and Inspection Services. These contracts are established with a term that is sufficient to cover the estimated time required to construction engineering and inspection. Contract Maximum's generally vary from the hundreds of thousands to the millions of dollars. The method of procurement for these types of contracts is through the selection and negotiation process established by CGS 13b-20. This process has been ongoing for a number of years and is anticipated to be an ongoing initiative.

**Cost Evaluation Summary:** This cost evaluation utilized a negotiated historical contract. The Cost Analysis Summary is presented below with the results showing a savings by performing this service in-house.

	Form C-100: Summary and Comparison of	Costs of Contact	ting Out and In-Hou	se Service Delivery
	Category	Projected Year 1		Projected Year 3
1.	Total Costs Related to Contracting Out with Indirect Costs	\$ 3,125,839.11	\$-	\$ -
2.	Total Costs Related to Contracting Out without Indirect Costs	\$ 2,995,758.75	\$-	\$ -
3.	Total Costs In-House with Indirect Costs	\$ 1,368,204.27	\$ -	\$ -
4.	Total Costs In-House without Indirect Costs	\$ 1,150,140.21	\$ -	\$ -
5.	(Costs)/Savings with Contracting Out with Indirect Costs	\$ (1,757,634.84)	\$-	\$-
6.	(Costs)/Savings with Contracting Out without Indirect Costs	\$ (1,845,618.55)	\$-	\$ -

**Comments related to Evaluation Results:** The results of this Cost Evaluation showed a savings if this service were to be performed in-house. The length of time required to establish and fill in-house positions related to this work would be lengthy, and would likely result in inspection delays.

\* The Consulting Engineer shall use the above maximum hourly rates until the Commissioner sends written notification rescinding the wage freeze

\*\* The Consulting Engineer may use the above maximum hourly rates prospectively only upon written notification by the Commissioner that the wage freeze has been rescinded.

If you concur with the fees and maximum hourly rates as presented In this letter, please acknowledge by signing below and return by mall or email to DOT,Negotiations@ct.gov within two (2) days and we will proceed an Agreement.

Please fill out the attached DBE Certification Form and return it with your concurrence.

Please provide two (2) original Acord Insurance forms that are used for your General Liability, Automobile Liability, Railroad Protective Liability (If Applicable), Valuable Papers and Records, Workers Compensation Insurance and Professional Liability Insurance.

All correspondence regarding negotiations is strictly confidential, therefore, your return should be stamped confidential.

Accepted 18C Date

Very truly yours

Derlok Lessard Chairman Negotiations Committee

Department of Administrative Services

Transportation Engineer 1 (Construction Engineering) (40 Hour) (8848FS) \$29.97-\$40.37 Hourly / \$2,397.97-\$3,229.58 BiWeekly / \$62,587.02-\$84,292.04 Yearly

Notify Me when a Job Opens for the above position(s)

#### PURPOSE OF JOB CLASS (NATURE OF WORK)

In the Department of Transportation, this class is accountable for performing less complex engineering and related tasks in highway construction, inspection of construction projects and specialized engineering activities such as materials testing, programming and scheduling, contracts, municipal systems or surveys.

#### SUPERVISION RECEIVED

Works under the general supervision of an engineer or an employee of higher grade in the performance of routine tasks; receives closer supervision when performing more advanced tasks.

#### SUPERVISION EXERCISED

May lead paraprofessional or clerical employees as assigned.

#### EXAMPLES OF DUTIES

Performs a limited range of related construction engineering and inspection duties; inspects and oversees inspection of culvert and drainage structures, bridge and structure foundations, pavements and other structures; notes unforeseen conditions and recommends specific changes in original plans and specifications; oversees placing, maintaining and lighting of detour and safety signs; oversees laying out of limits of work; monitors contractor performance in accordance with plans and specifications; oversees placing, maintaining and lighting of detour and safety signs; oversees laying out of limits of work; monitors contractor performance in accordance with plans and specifications; checks work by others; collects necessary data and prepares daily labor, material and progress reports; checks swork by others; oversees test boring crews; takes samples and performs field or laboratory tests such as density, gradations, compactions; studies new methods of construction or maintenance, new materials or unusual design features; prepares construction specification graphical and tabular data and charts; operates all surveying instruments; acts as chief inspector for highway construction projects; acts as chief of survey party; studies terrain for line of location of structure; instructs party members in their tasks; keeps notes; controls accuracy and progress of work; directs noting of topographic details, given right of way and property maps; directs locating of right of way and boundary markers; checks placing of markers; prepares, revises and edits complex planimetric and topographic mapping; develops cross-sections from aerial photography; develops contours, cross-sections and other digital terrain model (DTM) operations; performs related duties as required.

#### KNOWLEDGE, SKILL AND ABILITY

Knowledge of principles and practices of more than one specialized field involved in transportation engineering such as construction, surveys, geodetic surveys, and materials testing; knowledge of highway construction methods and materials; skill in preparation of engineering and administrative reports; skill in use of computer aided design and drafting (CADD) applications; interpersonal skills; oral and written communication skills; ability to identify construction engineering and location problems and recommend solutions; ability to perform mathematical calculations; ability to interpret plans and specifications.

#### MINIMUM QUALIFICATIONS - GENERAL EXPERIENCE

A Bachelor's degree in Engineering or Construction Management and one (1) year of experience in transportation construction engineering or transportation engineering. For State employees, the one (1) year of experience must have been at the level of a Transportation Engineer Trainee.

# MINIMUM QUALIFICATIONS - SUBSTITUTIONS ALLOWED

1. Possession of Land Surveyor (LS) licensure or Professional Engineer (PE) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302 may be substituted for the Bachelor's degree requirement.

2. Possession of Land Surveyor-In-Training (LSIT) licensure or Engineer-In-Training (EIT) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302 may be substituted for the Bachelor's degree requirement.

3. Possession of at least Level III certification, from the National Institute for Certification in Engineering Technologies (NICET), in one of the following Civil Engineering Technology Programs may be substituted for the Bachelor's degree requirement:

a. Transportation Construction Inspection Program - Highway Construction Inspection

- b. Construction Materials Testing Program Asphalt or Concrete
- c. Transportation Program Highway Materials, Highway Surveys or Highway Construction Inspection

4. Possession of a Level III Survey Technician Certification from the National Society of Professional Surveyors may be substituted for the Bachelor's Degree requirement.

#### PROMOTION

After completion of two (2) years of successful and satisfactory performance as a Transportation Engineer 1 (Construction Engineering), an incumbent will be promoted by reclassification to Transportation Engineer 2 (Construction Engineering).

#### SPECIAL REQUIREMENTS

- 1. Incumbents may be required to possess appropriate certification from the New England Transportation Technician Program (NTTCP).
- 2. Incumbents in this class may be required to possess and retain a valid Motor Vehicle Operator's license.
- 3. Incumbents in this class may be required to travel.

#### WORKING CONDITIONS

Incumbents in this class may be exposed to some danger of injury or physical harm from highway or construction environments and a moderate degree of discomfort from exposure to year round weather conditions.

Motify Me when a Job Opens for the above position(s)

#### PURPOSE OF JOB CLASS (NATURE OF WORK)

In the Department of Transportation, this class is accountable for independently performing a full range of engineering or related tasks in one or more aspects of transportation construction engineering projects or studies in the following areas: construction, administration, rehabilitation, surveying, testing, materials testing, operations, or maintenance.

#### SUPERVISION RECEIVED

Works under the general supervision of an engineer or other employee of higher grade.

#### SUPERVISION EXERCISED

May lead professional, paraprofessional or technical employees and in some instances field forces; may supervise clerical personnel or field forces in administrative engineering work as assigned.

#### EXAMPLES OF DUTIES

Inspects construction projects; acts as a team member in preparation of plans and estimates for construction or maintenance of bridges, structures and highways; reviews shop plans; oversees collection, recording, preparation and analysis of data pertaining to materials testing and transportation planning; assists in budget preparation, report writing, general planning and administration of unit work from an engineering project coordination and technical stand point; prepares research and administrative reports; assembles and prepares contracts and unit cost figures; plans budgetary requirements; leads survey parties or acts as chief inspector of highway construction projects; oversees field and office work in surveys; performs complex tasks in the generation of base survey planimetric and topographing mad cross sections utilizing an analytical stereoplotter and a CADD (computer aided design and drafting) system work terminal; oversees and plans work of technical alides in maintenance, taking and analyzing test borings; performs related duties as required.

#### KNOWLEDGE, SKILL AND ABILITY

Considerable knowledge of principles and practices of more than one specialized field in transportation construction engineering such as construction, surveys and materials testing; skill and ability to analyze and evaluate construction location problems and provide effective solutions; considerable skills in use of computer aided design and drafting (CADD) applications; considerable technical skills in preparation of engineering and administrative reports; interpersonal skills; oral and written communication skills; ability to perform complex mathematical calculations; ability to develop and interpret plans and specifications.

#### MINIMUM QUALIFICATIONS - GENERAL EXPERIENCE

A Bachelor's degree in Engineering or Construction Management and two (2) years of experience at the junior working level in a professional transportation construction engineering or transportation engineering capacity.

#### MINIMUM QUALIFICATIONS - SPECIAL EXPERIENCE

One (1) year of the General Experience must have been at the junior working level in a professional transportation construction engineering or transportation engineering capacity. For State employees, this is interpreted at the level of Transportation Engineer 1 (Construction Engineering) or (Engineering).

#### MINIMUM QUALIFICATIONS - SUBSTITUTIONS ALLOWED

1. Possession of Land Surveyor (LS) licensure or Professional Engineer (PE) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302 may be substituted for the Bachelor's degree requirement.

2. Possession of Land Surveyor-In-Training (LSIT) licensure or Engineer-In-Training (EIT) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302 may be substituted for the Bachelor's degree requirement.

3. Possession of at least Level III certification, from the National Institute for Certification in Engineering Technologies (NICET), in one of the following Civil Engineering Technology Programs may be substituted for the Bachelor's degree requirement:

a. Transportation Construction Inspection Program - Highway Construction Inspection

- b. Construction Materials Testing Program Asphalt or Concrete
- c. Transportation Program Highway Materials, Highway Surveys or Highway Construction Inspection
- 4. Possession of a Level III Survey Technician Certification from the National Society of Professional Surveyors may be substituted for the Bachelor's Degree requirement.

5. A Master's degree in engineering may be substituted for one (1) year of the General Experience.

### SPECIAL REQUIREMENTS

Incumbents may be required to possess appropriate certification from the New England Transportation Technician Program (NTTCP).
 Incumbents in this class may be required to possess and retain a valid Motor Vehicle Operator's license.
 Incumbents in this class may be required to travel.

# WORKING CONDITIONS

Incumbents in this class may be exposed to some danger of injury or physical harm from highway or construction environments and a moderate degree of discomfort from exposure to year round weather conditions.

# COMPENSATION GUIDELINES

The classification of Transportation Engineer 2 (Construction Engineering) is assigned to Salary Group FS 23a.
 Employees shall proceed through that salary group and then shall proceed to the maximum salary of Salary Group FS 24.

3. This Job Code is identified with salary plan FE in CORE-CT.

4. Incumbents entering this class shall be placed in Salary Group FS 23a, step 4.

#### PURPOSE OF JOB CLASS (NATURE OF WORK)

In the Department of Transportation this class is accountable for acting as a working lead who assists a supervisor in supervising a designated group of employees and/or for performing the most complex engineering or related tasks in one or more aspects of transportation construction engineering projects or studies in the areas of construction, administration, rehabilitation, surveying, testing, materials testing, maintenance or operations.

#### GUIDELINES FOR JOB CLASS USE

WORKING LEAD LEVEL: Incumbents in this class report to a supervisory class and normally are assigned full time working lead responsibility for a minimum of two other employees while performing unit work activities. For supervisory type duties performed by a working lead the final approval/"sign-off" authority is vested in the supervisory level employee to whom the incumbent reports.

ADVANCED WORKING LEVEL: Incumbents in this class perform work that must clearly exceed the norm and include a concentration of highly advanced functions within assigned disciplines. Class use is on a limited or exceptional basis.

#### SUPERVISION RECEIVED

Works under the general direction of an employee of higher grade.

#### SUPERVISION EXERCISED

Leads engineers, technical and clerical employees of lower grade as assigned.

#### EXAMPLES OF DUTIES

Conducts field and office investigations of engineering, technical or other problems and prepares reports for higher level employees; analyzes problems and recommends effective solutions; assists in establishment of policy, procedures and methods; represents department in legislative matters; assists in development and review of department contracts; performs related duties as required.

WORKING LEAD LEVEL: As assigned by the supervisor distributes, prioritizes, oversees and reviews unit work; provides staff training and assistance; conducts or assists in conducting performance evaluations; acts as liaison with operating units, agencies, consultant staffs and other outside officials regarding unit policies and procedures; recommends policies and standards; prepares reports and correspondence; performs related duties as required.

Oversees a group of engineers and personnel of lower grade in construction of highways or other transportation projects; acts as a liaison with consulting engineers; trains in-house and consultant inspectors; reviews construction final cost estimates and verifies final payments; serves as technical advisor for construction projects; develops and maintains cost data relative to design, construction and maintenance of highways and bridges; prepares comprehensive reports; develops and maintains standards and specifications for highways and bridges consistent with technological advances in design, construction and maintenance; oversees group of engineers and other personnel conducting preliminary reconnaissance location surveys, preliminary design, estimating and plan preparation or conducting boundary surveys, setting and checking boundary monuments and preparing right-of-way boundary boundary plans; oversees chemical and physical testing and analysis and makes recommendations concerning suitability of construction and maintenance; prepares survey reports and recommendations on highway location; performs related duties as required.

#### KNOWLEDGE, SKILL AND ABILITY

Considerable knowledge of principles and practices involved in transportation construction engineering such as construction, surveys, geodetic surveys and materials testing; considerable knowledge of highway construction methods and materials; knowledge of administrative and financial controls with respect to transportation construction engineering plans, contracts, projects and reports: considerable knowledge of operational methodologies and established policies; considerable analytical, problem solving and technical report development skills; considerable interpersonal skills; considerable oral and written communication skills; considerable ability to interpret and apply principles of information systems and technologies; ability to analyze plans and estimates; some supervisory ability.

#### MINIMUM QUALIFICATIONS - GENERAL EXPERIENCE

A Bachelor's degree in Engineering or Construction Management and three (3) years of experience in transportation construction engineering.

# MINIMUM QUALIFICATIONS - SPECIAL EXPERIENCE

One (1) year of the General Experience must have been at the working level in a professional transportation construction engineering capacity. For state employees this is interpreted at the level of Transportation Engineer 2 (CONSTRUCTION ENGINEERING).

#### MINIMUM QUALIFICATIONS - SUBSTITUTIONS ALLOWED

1. Possession of Land Surveyor (LS) licensure or Professional Engineer (PE) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302 may be substituted for the Bachelor's degree requirement.

2. Possession of Land Surveyor-In-Training (LSIT) licensure or Engineer-In-Training (EIT) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302 may be substituted for the Bachelor's degree requirement.

3. Possession of at least Level III certification in the Civil Engineering Technology-Transportation Program, Highway Construction Inspection or Highway Surveys from the National Institute for Certification in Engineering Technologies (NICET) may be substituted for the Bachelor's degree requirement.

4. A Master's degree in engineering may be substituted for one (1) year of the General Experience.

5. Current incumbents in the class of Transportation Engineer 2 (CONSTRUCTION ENGINEERING) who do not possess the degree or certification/licensure qualifications as detailed on this class specification may be considered for promotion to Transportation Engineer 3 (CONSTRUCTION ENGINEERING) upon having three (3) years of experience in transportation construction engineering. One (1) of the three (3) years must have been as a Transportation Engineer 2 (CONSTRUCTION ENGINEERING) upon having three (3) years of experience in transportation construction engineering. One (1) of the three (3) years must have been as a Transportation Engineer 2 (CONSTRUCTION ENGINEERING).

#### SPECIAL REQUIREMENTS

Incumbents may be required to possess appropriate certification from the New England Transportation Technician Program (NTTCP).
 Incumbents in this class may be required to possess and retain a valid Motor Vehicle Operator's license.
 Incumbents may be required to travel.

#### WORKING CONDITIONS

Incumbents in this class may be exposed to some danger of injury or physical harm from highway or construction environments and a moderate degree of discomfort from exposure to year round weather conditions.

#### COMPENSATION GUIDELINES

The classifications of Transportation Engineer 3 (CONSTRUCTION ENGINEERING) and (ENGINEERING) are assigned to Salary Group FS 27a.
 Employees shall proceed through that salary group and then shall proceed to the maximum salary of Salary Group FS 28.
 These Job Codes are identified with salary plan FE in CORE-CT.

# **Cost-Effectiveness Evaluation or New or Renewal Privatization Contracts**

# State Contracting Agency: Dept. of Transportation

# Contract Title/Description: 11 Engineering Consultant Design Renewal 2019

**Need for New Contract/Renewal:** The Department is continuing the practice of hiring outside Consultants to provide Engineering Consultant Design Services to augment state forces where the Department does not have available staff to perform the work, or where the skills required to perform the work are not present within the Department.

**New Contract and Historical Contracts Information:** The Department is in the process of contracting with a number of firms for Engineering Consultant Design Services. These contracts are established with a term that is sufficient to cover the estimated time required to complete engineering design. Contract Maximum's generally vary from the hundreds of thousands to the millions of dollars. The method of procurement for these types of contracts is through the selection and negotiation process established by CGS 13b-20. This process has been ongoing for a number of years and is anticipated to be an ongoing initiative.

**Cost Evaluation Summary:** This cost evaluation utilized a negotiated historical contract. The Cost Analysis Summary is presented below with the results showing a savings by performing this service in-house.

	Form C-100: Summary and Comparison of	Costs of Contact	ting Out and In-Hou	se Service Delivery
	Category	Projected Year 1	Projected Year 2	Projected Year 3
	Total Costs Related to Contracting Out with			
1.	Indirect Costs	\$ 3,160,003.23	\$-	\$-

Phone:

(860) 594-3136

January 24, 2019

Mr. Najib O. Habesch BETA Group, Inc. 1010 Wethersfield Avenue, Suite 305 Hartford, CT 06114

Dear Mr. Habesch:

Subject:

Task Order Traffic Engineering State Project No: 172-477 CORE No. 18DOT0001AA

As a result of the telephone conversation on January 22, 2019, it is the Negotiations Committee's understanding that the lump sum fees for the subject project are as follows:

Preliminary Design	•.	ı	•	L.S. 5	1,789,400
Semi-Final			•	L.S.	233,900
Final Design				' L.S.	60,900
Direct Costs(Transportation)				_	50,000
Total					\$ 2,134,200

If you concur with the fees as presented in this letter, please acknowledge by signing below and return by mail or email to DOT.Negotiations@ct.gov within two(2) days and we will proceed to process this assignment.

Please fill out the attached DBE Certification Form and return it with your concurrence.

All correspondence regarding negotiations is strictly confidential, therefore, your concurrence should be stamped confidential.

#### PURPOSE OF JOB CLASS (NATURE OF WORK)

In the Department of Transportation and the Connecticut Airport Authority, this class is accountable for performing less complex engineering and related tasks in maintenance, structural highway or related transportation design and traffic engineering, research, pavement management, plotting complex field notes, planning and route planning or project engineering.

#### SUPERVISION RECEIVED

Works under the general supervision of an engineer or an employee of higher grade in the performance of routine tasks; receives closer supervision when performing more advanced tasks.

#### SUPERVISION EXERCISED

May lead paraprofessional or clerical employees as assigned.

#### EXAMPLES OF DUTIES

Performs a limited range of related engineering duties; acts as a design engineer in the preparation of design plans, profiles, cross sections, and design details for highways, bridges, and other transportation facilities such as airports, train stations, bus terminals, and maintenance facilities; acts as project engineer for bridge or other structures; prepares maps, plans, profiles and cross sections; checks work by others; prepares cost estimates; prepares design plans and makes necessary engineering calculations for such structures as plate girder and beam bridges, concrete beam and slab bridges, masonry and concrete abutments, drainage culverts, small buildings, pipelines and highway segments and sections; leads technical personnel of lower grade; performs special engineering investigations; uses CADD system and other computer applications; prepares structural analyses of bridges and structures; serves as project engineering design and special studies; analyzes highway accident reports to establish probable engineering causes; verifies such analyses by field surveys; investigates complaints regarding drainage or related matters; suggests design changes; serves as project engineer on specialized engineering staff activities such as hydraulics, drainage, bridge inspection, etc.; serves as project engineer in transportation planning or route planning activities; prepares less complex technical reports including supporting graphical and tabular data and charts; performs related duties as required.

#### KNOWLEDGE, SKILL AND ABILITY

Knowledge of principles and practices of more than one specialized field involved in transportation engineering such as bridge design, foundations, highway design, transportation facilities design, transportation planning, drainage or hydraulics, research, pavement design, pavement management and traffic; skill in preparation of engineering and administrative reports; skill in use of computer aided design and drafting (CADD) applications; interpersonal skills; oral and written communication skills; ability to identify engineering, highway, structural and pavement design, hydraulic and traffic problems and recommend solutions; ability to perform mathematical calculations; ability to interpret plans and specifications.

#### MINIMUM QUALIFICATIONS - GENERAL EXPERIENCE

A Bachelor's degree in Engineering and one (1) year of experience in transportation engineering or transportation construction engineering. For State employees, the one (1) year of experience must have been at the level of a Transportation Engineer Trainee,

#### MINIMUM QUALIFICATIONS - SUBSTITUTIONS ALLOWED

1. Possession of Professional Engineer (PE) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302 may be substituted for the Bachelor's degree requirement.

2. Possession of Engineer-In-Training (EIT) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302 may be substituted for the Bachelor's degree requirement.

### PROMOTION

After completion of two (2) years of successful and satisfactory performance as a Transportation Engineer 1 (Engineering), an incumbent will be promoted by reclassification to Transportation Engineer 2 (Engineering).

ExhibitC

#### SPECIAL REQUIREMENTS

1. Incumbents in this class may be required to possess and retain a valid Motor Vehicle Operator's license. 2. Incumbents in this class may be required to travel.

#### WORKING CONDITIONS

Incumbents in this class may be exposed to some danger of injury or physical harm from highway or construction environments and a moderate degree of discomfort from exposure to year round weather conditions.

#### PURPOSE OF JOB CLASS (NATURE OF WORK)

In the Department of Transportation and the Connecticut Airport Authority this class is accountable for acting as a working lead who assists a supervisor in supervising a designated group of employees and/or for performing the most complex engineering or related tasks in one or more aspects of engineering projects or studies in the areas of administration, bridge design, drainage, electrical, foundations, hydraulics, maintenance, operations, pavement management, regulation compliance, rehabilitation, research, traffic or utilities.

#### GUIDELINES FOR JOB CLASS USE

WORKING LEAD LEVEL: Incumbents in this class report to a supervisory class and normally are assigned full time working lead responsibility for a minimum of two other employees while performing unit work activities. For supervisory type duties performed by a working lead the final approval/"sign-off" authority is vested in the supervisory level employee to whom the incumbent reports. ADVANCED WORKING LEVEL: Incumbents in this class perform work that must clearly exceed the norm and include a concentration of highly advanced functions within assigned disciplines. Class use is on a limited or exceptional basis.

#### SUPERVISION RECEIVED

Works under the general direction of an employee of higher grade.

#### SUPERVISION EXERCISED

Leads engineers, technical and clerical employees of lower grade as assigned.

#### EXAMPLES OF DUTIES

Oversees work of lower level engineers and performs complex design work; designs difficult foundations and bridges of advanced design; makes field inspection of bridge sites to obtain information necessary for design of important structures; oversees field inspection of structural condition of existing structures and preparation of sketches, plans and recommendations for adequate repair, acts as liaison between towns and state as consulting engineer in repair of bridges; oversees and conducts research on materials incorporated in bridges, highways, and miscellaneous structures and maintenance and construction methods in field; oversees state and consultant engineers in review of storm sewer and culvert designs and computations prepared by Design division and contracting engineers for watersheds of 650 acres and less; provides technical advice to Design division and District Engineers on pollution control measures and unusual storm sewer and culvert designs; prepares computations for storm sewer and culvert designs; attends field reviews on all new designs for highway projects; recommends revisions to improve drainage design; oversees laboratory work on soil samples for determination of void ratio, water content, specific gravity, grain size distribution, plasticity limits, permeability, optimum moisture content, confined and unconfined compressive strength, direct shear and consolidation; prepares detailed geotechnical reports and recommendations; oversees analyses, computations, preparation of plans and data relating to hydraulic problems encountered in planning and design of highways; performs hydrographic analysis and flood routing for retention basin designs; serves as expert witness in court cases; reviews drainage design on major permit applications for shopping centers and housing developments; assists in preparation and updating of Drainage Manual; oversees engineers, electricians and technicians in design or maintenance of extensive highway lighting, traffic light installations and computerized traffic control systems; performs complex work in preparation of plans, specifications and estimated cost of electrical contracts and work; oversees inspection of electrical construction and maintenance work and preparation of monthly and final estimates; coordinates preliminary surveys and planning of engineering requirements for construction and maintenance of electrical installations with state utilities; assists in coordination of work of design engineers with consulting engineers in preparation of plans to determine contract documents; recommends need for test, alterations, revision of replacement of equipment associated with highway lighting, traffic lights, drawbridges, and highway buildings; acts as consultant to district forces and other state agencies; oversees consultant engineers in the preparation of plans, specifications, and estimates of bridges and structural improvement, construction and reconstruction of highways and construction or reconstruction of transportation facilities; recommends treatment of alignment, grade, surface and drainage features; makes project reports and analyzes comparative routes for economy, feasibility and utility; oversees activities of engineers and technical assistants engaged in review and processing of major traffic generator studies, highway traffic engineering investigations, surveys, design and research; reviews reports from investigators and subordinates; prepares final reports and recommendations applying to traffic signs, signals, markings, control devices, illumination, channelization, detour and route designations; represents department in state, town, public meetings; oversees and reviews plans, specifications and cost estimates for adjustment of relocation of public utilities in conflict with design and layout of construction for purpose of establishing their engineering adequacy; determines extent to which state shall reimburse utility companies for costs incurred; prepares and reviews agreements governing terms involved; represents state in negotiations with Federal Highway Administration for reimbursement of funds to state; confers with consulting, engineers, corporate, municipal planners, departmental personnel and others involved in coordinating utility adjustments with highway reconstruction work; advises departmental auditors on acceptability of credits offered or claims for payment made; conducts field and office investigations of engineering, technical or other problems and prepares reports for higher level employees; analyzes problems and recommends effective solutions; assists in establishment of policy, procedures and methods; represents department in legislative matters; assists in development and review of department contracts; performs related duties as required.

WORKING LEAD LEVEL: As assigned by the supervisor distributes, prioritizes, oversees and reviews unit work; provides staff training and assistance; conducts or assists in conducting performance evaluations; acts as liaison with operating units, agencies, consultant staffs and other outside officials regarding unit policies and procedures; recommends policies and standards; prepares reports and correspondence; performs related duties as required.

Exhibit C

#### KNOWLEDGE, SKILL AND ABILITY

Considerable knowledge of principles and practices involved in transportation engineering such as bridge design, foundations, highway design, transportation facilities design, transportation planning, maintenance, drainage or hydraulics, research, pavement management and traffic; knowledge of administrative and financial controls with respect to transportation engineering plans, contracts, projects and reports; considerable knowledge of operational methodologies and established policies; considerable analytical, problem solving and technical report development skills; considerable interpersonal skills; considerable or al and written communication skills; considerable ability to interpret and apply principles of information systems and technologie; solving and established policies; solving and technologie; solving and stimates; some supervisory ability.

#### MINIMUM QUALIFICATIONS - GENERAL EXPERIENCE

A Bachelor's degree in Engineering and three (3) years of experience in transportation engineering.

# MINIMUM QUALIFICATIONS - SPECIAL EXPERIENCE

One (1) year of the General Experience must have been at the working level in a professional transportation engineering capacity. For state employees this is interpreted at the level of Transportation Engineer 2 (ENGINEERING).

#### MINIMUM QUALIFICATIONS - SUBSTITUTIONS ALLOWED

1. Possession of Professional Engineer (PE) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302 may be substituted for the Bachelor's degree requirement.

2. Possession of Engineer-In-Training (EIT) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302 may be substituted for the Bachelor's degree requirement.

3. A Master's degree in engineering may be substituted for one (1) year of the General Experience.

4. Current incumbents in the class of Transportation Engineer 2 (ENGINEERING) who do not possess the degree or certification/licensure qualifications as detailed on this class specification may be considered for promotion to Transportation Engineer 3 (ENGINEERING) upon having three (3) years of experience in transportation engineering. One (1) of the three (3) years' must have been as a Transportation Engineer 2 (ENGINEERING).

#### SPECIAL REQUIREMENTS

1. Incumbents in this class may be required to possess and retain a valid Motor Vehicle Operator's license.

2. Incumbents may be required to travel.

#### WORKING CONDITIONS

Incumbents in this class may be exposed to some danger of injury or physical harm from highway or construction environments and a moderate degree of discomfort from exposure to year round weather conditions.

#### COMPENSATION GUIDELINES

1. The classifications of Transportation Engineer 3 (CONSTRUCTION ENGINEERING) and (ENGINEERING) are assigned to Salary Group FS 27a.

2. Employees shall proceed through that salary group and then shall proceed to the maximum salary of Salary Group FS 28.

3. These Job Codes are identified with salary plan FE in CORE-CT.

#### PURPOSE OF JOB CLASS (NATURE OF WORK)

In the Department of Transportation and Connecticut Airport Authority this class is accountable for supervising engineers and other staff engaged in engineering and/or related tasks in one or more aspects of transportation engineering projects or studies in the areas of administration, bridge design, design, drainage, electrical, foundations, hydraulics, maintenance, operations, pavement management, regulation compliance, rehabilitation, research, traffic or utilities.

#### GUIDELINES FOR JOB CLASS USE

Incumbents shall perform in a supervisory capacity providing technical supervision over transportation engineering projects or studies, with specialization in a specific area of engineering as dictated by assigned Engineering parenthetical. Two (2) positions may be used to serve as the Primary Assistant to the Chief Engineer or to oversee the Department's Consultant Selection process.

#### SUPERVISION RECEIVED

Receives general direction from an employee of higher grade.

#### SUPERVISION EXERCISED

Supervises engineers, technical and clerical employees of lower grade as assigned.

#### EXAMPLES OF DUTIES

Supervises work of engineers, technicians and other technical and/or clerical personnel in any one of several organizationally specialized engineering operations, railroad or airport sections; reviews detailed plans, specifications or studies of complex engineering problems related to areas such as highway, bridge, facility or geometric design, traffic engineering, computer applications, electrical engineering, highway operations, geo-technical engineering, hydraulics and drainage, utilities, contract and project development, environmental compliance, railroad engineering or airport engineering; supervises research into development of improved materials or products and testing methods; supervises field and office research projects on engineering and technical problems; supervises research on economic, financial and administrative aspects of pavement management, highway construction and maintenance, design of highways and bridges with reference to materials to be used and in pavement work correction, resurfacing and winter maintenance techniques; coordinates design related elements of construction projects; prepares special reports, cost estimates, standards and specifications and fee schedules for consultant engineers, surveyors or contractors; reviews progress reports; schedules, assigns, oversees and reviews work of staff training and assistance; conducts performance evaluations; determines prointes and plans section work; establishes and maintains section procedures; develops or makes recommendations on policies and standards; acts as liaison with other operating sections; supervises or prosents, recommendations and correspondence; conducts and funder state and federal policies; prepares comprehensive reports on fiscal matters relating to departmental engineering operations; directs concurrent billing programs for department; acts as an assistant in performing highly specialized administrative or engineering studies; supervises or provides highly technical assistance in conducting studies or establishing pol

#### KNOWLEDGE, SKILL AND ABILITY

Considerable knowledge of principles and practices involved in transportation engineering such as bridge design, foundations, highway design, transportation facilities design, transportation planning, drainage or hydraulics, research, pavement design, pavement management, traffic and utilities; considerable knowledge of administrative and financial controls with respect to transportation engineering plans, contracts, projects and reports; considerable knowledge of relevant agency policies and procedures; considerable knowledge of relevant state and federal laws, statutes and regulations; considerable knowledge of departmental operational methodologies; considerable knowledge of latest engineering principles, techniques and procedures employed in engineering field; considerable ability to analyze and review engineering reports, plans and specifications; considerable ability to interpret and apply principles of information systems and technologies; considerable interpresonal skills; considerable interpresonal skills;

#### MINIMUM QUALIFICATIONS - GENERAL EXPERIENCE

Eight (8) years of experience in transportation engineering.

Exhibit C

#### MINIMUM QUALIFICATIONS - SPECIAL EXPERIENCE

One (1) year of the General Experience must have been as an engineer with lead responsibility for complex transportation engineering projects in bridge design, drainage, electrical, foundations, traffic, facilities design, highway design, research, utilities or hydraulics. For state employees this is interpreted at the level of Transportation Engineer 3 (ENGINEERING).

### SPECIAL REQUIREMENTS

1. Incumbents must possess Professional Engineer (PE) licensure from the Department of Consumer Protection State Board of Examiners for Professional Engineers and Land Surveyors consistent with C.G.S.§20-302.

2. Incumbents in this class may be required to possess and retain a valid Motor Vehicle Operator's license.

3. Incumbents in this class may be required to travel.

#### COMPENSATION GUIDELINES

The classification of Transportation Supervising Engineer (ENGINEERING) is assigned to Salary Group FS 30a.
 Employees shall proceed through that salary group and then shall proceed to the maximum salary of Salary Group FS 31.
 These Job Codes are identified with salary plan FE in CORE-CT.
